

South Australian Off Road Motorcycling Strategy and Facilities Master Plan

The S.A. Off Road Motorcycle Strategy and Facility Master Plan will guide the future provision and management of legal off road motorcycle facilities and develop appropriate management strategies for the sport.

Why should you support this plan?

1. Off road motorcycle riding is a growing sport; 2,500 off road bikes have been sold each year since 2005.
2. Currently there is very limited access to legal sites/facilities, resulting in high incidences of illegal riding in forests, native bushland, beaches, public land, reserves and roadside verges.
3. Currently riders (including underage) are riding their unregistered motorcycles on public land such as SA Forestry controlled land and roadside verges causing major issues for land managers around compliance, risk management and site degradation.

What are the benefits of completing this plan?

- Identification of the social, economic and cultural benefits of off-road motorcycle use in South Australia and for individual local governments/regions.
- Identify suitable land/sites where off road motorcycle facilities could be developed for the sports use.
- Develop strategies and recommendations to address risk management including participant safety, landowner liability, insurance and appropriate mitigation measures.
